

Seed dispersal mechanisms

For each plant, infer which dispersal mechanism it uses. Draw / write the name of the plant in the box.

Find the tiny seeds on each plant.

animal dispersal	
fruit or berry	animal eats the fruit with seeds, then poops the seeds out later
burr	sticks to fur and carried away by an animal
hard-shelled nut	scattered and buried by animals to eat later

wind dispersal	
blade	falls slowly so the wind blows it sideways
down	lifted and blown around by the wind

Other seed dispersal mechanisms:

water
expulsion (exploding)
